

# Bringing Customized Specialty Telemedicine Programs to Your Hospital and Clinics

Access TeleCare works with hospitals and clinics to build customized telemedicine programs that bring specialists directly to patients.

Access TeleCare's board-certified/board-eligible specialists work with partnering clinics' on-site clinicians to deliver coordinated, integrated care. With an Access TeleCare telemedicine program, clinics have known, dedicated specialists who work with their teams and are accountable to their facility's goals.

From cardiology and infectious disease to maternal-fetal medicine and pulmonology, Access TeleCare's collaborative telemedicine programs allow hospitals and their clinics to augment their outpatient care to better serve the needs of their communities and to retain more patients locally.

## Benefits of an Access TeleCare Outpatient Telemedicine Program:

- Chronic care management
- Initial & follow up visits
- Post-hospital discharge clinic; reduced readmissions/penalties
- Serve more patients locally and stop losing patient volume
- Offer a wider range of services than would be possible if in-person physicians had to be recruited and retained
- Support on-site medical staff with consultative expertise

## HOW IT WORKS

Clinic/hospital provider refers patients to the telemedicine specialist

Clinic team schedules the appointment

Patient comes to regular clinic for the scheduled telemedicine appointment

Telemedicine specialist uses hospital/clinic EMR for documentation

# Delivering High-Quality Outpatient Care

Specialty medicine provided locally for better patient care.

Access TeleCare's customized telemedicine programs for outpatient clinics allow patients to receive specialty medical care, all without having to leave their community.

With Access TeleCare, hospitals and their outpatient clinics have access to world-class specialists to diagnose and treat patients with a range of chronic and acute conditions, including diabetes, heart failure, Parkinson's disease, multiple sclerosis, chronic kidney disease, post-surgical wound infections, complex pregnancies, and COPD.

## OUR VISION FOR EXCELLENCE

Access TeleCare seeks to systematically improve and regionalize patient care, delivered through a truly unique combination of clinical workflows, world-class physicians committed to clinical excellence, and a satisfying patient experience supported with a clinical sense of urgency.

Now one of the largest providers of inpatient telemedicine in the U.S., Access TeleCare builds scalable programs to drive clinical and financial outcomes across the hospital enterprise.

"...with Access TeleCare, our patients in our wound care center, hospital, and emergency department no longer have to travel to San Antonio or wait for care. We are able to provide this important service on site, when and where they need it most."
