

The largest provider of telePsychiatry services

Our board-certified psychiatrists provide 24/7 coverage for hospital emergency departments, inpatient consultation-liaison psychiatry, and outpatient medication management and consultation.

TelePsychiatry is a founding Access TeleCare service line, and there are currently nearly 250 active Access TeleCare telePsychiatry programs nationwide.

Emergency TelePsychiatry

Our telePsychiatry service covers the hospital emergency department for patients presenting with psychiatric conditions or mental health crises. It can also be activated anywhere in the hospital.

Outpatient TelePsychiatry

With an Access TeleCare outpatient telePsychiatry service, clinics can provide time-sensitive mental health diagnosis and medication management for their patients. Treatment is better integrated with primary care and crisis resulting from medication lapses are reduced.

Consultation-Liaison TelePsychiatry

Our consultation-liaison telePsychiatrists work with on-site hospital teams to collaboratively care for patients with complex medical and/or surgical conditions needing psychiatric support. Our consultation-liaison telePsychiatrists are part of hospitals' multidisciplinary teams to care for patients.

“ So many hospitals lack the adequate resources to be able to care for a growing number of behavioral health patients. With Access TeleCare, a seasoned, highly qualified professional is only a video consultation away, allowing hospitals to provide the highest quality behavioral health care, regardless of location. ”

John Kenny, M.D.

Chief of Psychiatry
