

Dialysis Supervision & Program Management

Through its teleNephrology program, Access TeleCare provides a **comprehensive Dialysis Supervision Model** to support healthcare organizations in establishing and maintaining safe, compliant, and clinically robust dialysis services.

With **virtual oversight by board-certified nephrologists**, facilities can implement or expand in-house dialysis programs while ensuring appropriate clinical governance, operational integrity, and regulatory compliance.

WHO IT'S FOR

This model supports hospitals and inpatient rehabilitation facilities in retaining patients requiring renal replacement therapy, maintaining continuity of care, and capturing reimbursement associated with dialysis services delivered within their facility. Leveraging the latest advancements in dialysis technology that is both efficient and effective, Access TeleCare can also support your organization in developing new dialysis capabilities where there were not any previously.

BENEFITS

- Maintain dialysis capability or establish new dialysis capability without the need for on-site nephrologist physician staffing
- Retain dialysis patients that would have needed transfer
- Improve care coordination and overall care delivery for patients with kidney disease

HOW IT WORKS

Access TeleCare's teleNephrology programs provide **consistent clinical nephrology oversight from a board-certified nephrologist, protocol management, and multidisciplinary coordination** to ensure patient safety and optimal outcomes.

 **Medical Direction and Clinical Governance**

 **Clinical Staff Education and Support**

 **Program Development and Implementation**

 **Dialysis Machine Technology that is Low-Cost and High-Quality**

 **Dialysis Protocol Management**

 **Regulatory Compliance and Performance Improvement Alignment**

IMPACT

Retain Dialysis Patients

Provide dialysis services where patients are already receiving care, keeping them close to home for care, improving your CMI, and avoiding expensive transfer costs.

Strengthen Clinical Oversight

Structured nephrology supervision ensures dialysis protocols, patient management, and safety standards are consistently maintained.

Improve Operational Efficiency

Dialysis services can be delivered within the facility's existing clinical infrastructure, minimizing logistical complexity and using cost-effective yet high-quality dialysis technology.

Enhance Continuity of Care

Patients receive coordinated renal care alongside their primary treatment plan within the same clinical environment.

Contact Access TeleCare to learn how Dialysis Supervision with teleNephrology can support your facility's renal care program.
