Advanced Maternal-Fetal Medicine Without the Barrier of Distance

Access TeleCare helps hospitals and outpatient maternity care practices expand access to maternal-fetal medicine expertise, strengthen high-risk pregnancy programs, and provide more coordinated obstetrics care close to home.

Our comprehensive teleMaternal-Fetal Medicine program combines experienced MFM physicians, advanced sonography support, responsive consultations, and the operational infrastructure needed to support high-risk pregnancy care.

The Access TeleCare Advantage

Experienced MFM Specialists

Every Access TeleCare MFM physician has at least nine years of maternal-fetal medicine experience, with an average of 12.5 years.

Flexible Program Structure

Access TeleCare provides inpatient and outpatient consultations, routine and urgent ultrasound interpretations, and support for facilities across all NICU and maternal care designation levels.

Support Beyond the Encounter

Every program includes dedicated implementation, client services, clinical coordination, physician liaison, and 24/7/365 technical support.

Responsive Clinical Support

- **28-MINUTE AVERAGE** ultrasound interpretation time
- **4-MINUTE AVERAGE** referring-provider callback time
- MFM physician on screen within **30 MINUTES** for emergent consulations
- Routine ultrasound interpretations completed within **24 HOURS**

Strengthen High-Risk Pregnancy Care in Your Community

Expand specialty access. Support local clinicians. Help mothers and babies receive the right care at the right time.

Advanced Practice Sonography: An Added Layer of Expertise

Access TeleCare's Advanced Practice Sonography Team consists of registered diagnostic medical sonographers with extensive experience in maternal-fetal medicine imaging.

Working alongside on-site sonographers and obstetricians and Access TeleCare MFM physicians, the team improves image capture quality, identifies potentially overlooked abnormalities, and ensures urgent findings are escalated quickly.

Advanced Practice Sonography Support for Local Maternity Care Teams

- Improve diagnostic confidence and abnormality detection
- Provide consistent, high-quality image acquisition
- Reduce suboptimal studies and patient callbacks
- Escalate time-sensitive findings for prompt MFM review

Specialized Experience Behind Every Ultrasound

40+ YEARS
Combined Ultrasound Experience

10+ YEARS
MFM scanning experience for each advanced practice sonographer

MULTIPLE PLATFORMS
Experience with GE ViewPoint, StudyCast, UltraLinq, Tricefy, and client-owned systems

Early Detection Changes Outcomes

When a routine ultrasound was classified as "normal but suboptimal, by a local maternity practice sonographer, Access TeleCare's Advanced Practice Sonography Team identified signs of a rare congenital heart defect that had been overlooked.

The ultrasound finding was immediately escalated to an Access TeleCare MFM physician, who coordinated next steps with the patient's local obstetrician. The finding meant the patient could plan delivery at a hospital equipped with the specialists and resources her baby would need, rather than experience an unplanned-for emergency, potentially necessitating transfer of mom and baby and losing valuable time to intervention.
